

## PROFESSIONAL SUMMARY

**Results-driven Software Engineer II** with 2+ years of experience building and optimizing high-performance **backend and distributed systems** using **C++, Java**, and **Python** on **Linux**. Strong in **object-oriented design, concurrency**, and **low-latency systems**, with hands-on experience in **network programming, secure protocols TLS/SSL, HTTP, DNS, TCP/IP, and microservices architecture**. Expertise in designing **RESTful APIs**, improving system reliability and performance, and driving **CI/CD automation and DevOps** across **AWS, GCP, and Azure**.

## SKILLS

• C++/C • Java • Python • Spring Boot • SQL • Git • Docker • Bash • Jenkins • HTML • CSS • JavaScript • XML  
• Git • Cmake • Redis • MySQL • PostgreSQL • GraphQL • Azure • Kafka • GCP • Nginx • Aws • Linux • gRPC  
• Data Structure and Algorithm • Microservices • Design Patterns • Agile • Multithreading • CI/CD

## WORK EXPERIENCE

### Teradata

*Software Engineer II*

📅 Mar 2025 – Dec 2025

📍 Hyderabad, India

- Collaborated with **Dell engineering** to integrate **PPDM agent-based communication** into **C++ backend components**, enabling interaction with **Data Domain servers** and supporting **10TB+** enterprise backup workflows on Linux.
- Implemented secure, **low-latency network communication (TLS 1.3, HTTP/TCP/IP)**, reducing handshake latency by **40%** and improving reliability for **10TB+** cross-cloud data pipelines.
- Improved system **throughput** and **scalability** by **30%** through **multithreading, socket-level optimizations, rate limiting, and resilient retry mechanisms**.
- Served as **POC for CI/CD and DevOps, automating pipelines, observability**, and release workflows using **Python and Bash**, reducing manual operational effort by **30%**.
- Mentored **junior developers** on **API development**, improving team efficiency by **20%**.

### Teradata

*Software Engineer*

📅 Jul 2023 – Feb 2025

📍 Hyderabad, India

- Built **RESTful services and microservice-style components**, contributing to cloud migration and re-architecting modules for better **scalability, maintainability, and performance**.
- Improved **performance and reliability** for **S3-compatible object stores (AWS, Dell EMC, IBM COS, MinIO)** through **API-level** and network optimizations.
- Collaborated with **cross-functional teams (DevOps, SRE, QA, and platform)** teams to operate, monitor, and maintain **50TB+** distributed storage environments, ensuring high **availability, reliability, and incident readiness**.

### Teradata

*DevOps Intern*

📅 Jan 2023 – Jul 2023

📍 Hyderabad, India

- Built and automated **CI/CD pipelines** across **AWS, GCP, and Azure**, developing **Python and Bash automation** for deployments, **log processing, monitoring, and diagnostics**, and improving pipeline **throughput by 30%** through infrastructure optimization.

## ACHIEVEMENTS

- Integrated the **MCP Server** with Teradata's enterprise platform to enable **distributed job orchestration and monitoring**, earning **Runner-Up recognition** and advancing to an **internal architecture review**.
- Solved over **600+ programming questions** on coding platforms, demonstrating dedication to improving programming skills.

## PERSONAL PROJECTS

### Network-Centric Real-Time Backend System

🔗 Github Link

- Built a **real-time distributed backend system** using **C++, Java, gRPC, REST, GraphQL, WebSocket, and WebRTC**, evolving from **raw TCP networking** to a **production-style API gateway** with resilience, streaming, and performance benchmarking.

## EDUCATION

### Graphic Era Hill University

*B.Tech in Computer Science and Engineering (CGPA: 8.64)*

📅 August 2019 – July 2023
